FLUENCY AGENT ADVANCED

Fluency Agent Advanced is a seed lubricant for corn and soybeans that improves planting performance while reducing the amount of dust potentially released during planting. It is an alternative to talc, graphite and talc-/graphite-blended seed lubricants.

FLUENCY AGENT ADVANCED DOES MORE THAN OTHER SEED LUBRICANTS

Better Flowability and Singulation
Improves seed flow from the central fill hopper to row units for more efficient planting and more uniform stands.

Easier Cleanup
Less residue buildup in the seed hopper for cleaner equipment and handling.

Less Dust for Better Stewardship
Further reduces the amount of dust and active ingredient potentially released during planting, thus reducing the potential risk of exposure to foraging honey bees and other pollinators.

Additional Benefits
- Measures, pours and mixes easily
- Convenient low use rate
- Can be used in all makes and types of planters

John Deere® vacuum planter mini-hopper on central fill hopper system
Case IH vacuum meter housing
DIRECTIONS FOR USE:
Apply at the time of planting to reduce seed-to-seed friction and improve planting uniformity.
• Apply at the rate of 0.29 oz. (using the included 23 cc measuring cup) per 80,000-kernel seed corn unit or 0.29 oz. per 140,000-seed soybean unit.
IMPORTANT: Mix Fluency Agent Advanced thoroughly into the seed.
• When filling large central fill seed hoppers, add Fluency Agent Advanced to the seed as it is filling the hopper to ensure even distribution.
DO NOT USE MORE THAN 23 CC EQUIVALENT (0.29 OZ.) PER SEED UNIT!
• Can be used in all makes and types of planting equipment that recommend the use of a seed lubricant.
